Princeton University Press. Paperback. Book Condition: new. BRAND NEW, The Long Thaw: How Humans are Changing the Next 100,000 Years of Earth's Climate (Revised edition), David Archer, David Archer, The human impact on Earth's climate is often treated as a hundred-year issue lasting as far into the future as 2100, the year in which most climate projections cease. In The Long Thaw, David Archer, one of the world's leading climatologists, reveals the hard truth that these changes in climate will be "locked in," essentially forever. A human-driven, planet-wide thaw has already begun, and will continue to impact Earth's climate and sea level for hundreds of thousands of years. The great ice sheets in Antarctica and Greenland may take more than a thousand years to respond completely, changing sea level nearly one hundred times more than the forecast for the year 2100. With a new preface that discusses recent advances in climate science, and the impact on global warming and climate change, The Long Thaw shows that it is still not too late to avert dangerous climate change--if we can find a way to cooperate as never before.
